PROFILE

Computer Science student completing a National Diploma at Tshwane University of Technology in December 2026, seeking a graduate programme or internship in software development. Brings over 1 year of industry experience gained alongside studies, currently as Full-Stack Developer and Team Leader at ICEP / IOL, and has delivered working projects in Java / Spring Boot, C# / ASP.NET Core and React / TypeScript.

EDUCATION

National Diploma in Computer Science – Tshwane University of Technology 2022 – 2026

- Completing December 2026 (includes Work-Integrated Learning – WIL)
- Academic projects: TextSpectacles Secure App (INT316D Internet Programming) and HealthFirst Pharmacy Inventory Management System (PRO732)

LEARNING AGILITY & HIGHLIGHTS

- Progressed through three industry roles while studying: Partner and Backend Developer at Illumidev-Solutions (Jul 2024 – present, part-time), LMS Administrator at DEKRA IOL (Nov 2024 – Jul 2025) and Full-Stack Developer & Team Leader at ICEP / IOL (Jun 2026 – present)
- Leads a development team at ICEP / IOL, maintaining production systems and applying security updates and vulnerability patches
- Built working projects across several ecosystems: Java (Swing, Java EE, Spring Boot), C# / ASP.NET Core, Node.js, React, Next.js and React Native
- Public portfolio of working projects with source code: github.com/Immortal8725

WORK EXPERIENCE

Full-Stack Developer & Team Leader – ICEP / IOL Jun 2026 – Present

- Lead a development team in maintaining and enhancing production systems, ensuring high reliability and continuous improvement
- Diagnose and resolve complex bugs to improve system stability, performance and user experience
- Implement regular security updates, vulnerability patches and best practices to strengthen application security
- Collaborate with stakeholders to prioritise improvements and deliver technical solutions that support business needs

Partner · Backend Developer – Illumidev-Solutions (Part-time, Pretoria · Hybrid) Jul 2024 – Present

- Work with the team to develop AI models that process and analyse market data to predict market trends
- Optimised API performance, error handling and data flow to improve system stability and responsiveness
- Collaborated with frontend and DevOps teams to ensure seamless integration and smooth production deployments

LMS Administrator – DEKRA IOL (Centurion) Nov 2024 – Jul 2025

ACADEMIC & PERSONAL PROJECTS

TextSpectacles Secure App | github.com/Immortal8725/TextSpectaclesSecureApp

Java EE · JSP · Servlets · EJB · JDBC · MySQL · GlassFish / Payara

- Academic project (INT316D Internet Programming): secure web app for field agents and HQ managers with role-based authentication and authorisation
- Encrypted messages with DESede (Triple DES), implemented business logic in EJB session beans and persisted data to MySQL

HealthFirst PIMS (Pharmacy Inventory) | github.com/Immortal8725/Pharmacy-Inventory-Management-System

Java · Swing · JDBC · MySQL 8 / H2 · SQL

- Academic project (PRO732): multi-user desktop app replacing paper stock books, with role-based Administrator and Cashier access and SHA-256 hashed passwords
- Designed the MySQL 8 schema with constraints and sample data; implemented point of sale, billing and stock deduction through JDBC data-access objects
- Built business reports: sales by date range, item-wise units and revenue, low-stock (reorder level) and 30-day expiry

Digimed Connect | digimed-connect.co.za

React · Spring Boot · PostgreSQL · Node.js · Socket.IO

- Designed and developed a full-stack paperless healthcare platform connecting patients, doctors, clinics and staff
- Built RESTful APIs with a clean layered architecture (Controller → Service → Repository) using Spring Boot and PostgreSQL
- Implemented patient management, appointment booking and multi-tenant clinic features on the React frontend

Clocking Management API | github.com/Immortal8725/ClockingManagement

ASP.NET Core 8 · C# · Entity Framework Core · PostgreSQL · JWT · Docker

- Built a workforce time-and-attendance API in a layered API / Core / Infrastructure solution with repository and unit-of-work patterns
- Covers JWT auth with refresh tokens, employees, shifts, leave requests, biometric profiles, attendance and an auto clock-out background service

ElectroRaid – Municipal Outage Platform | github.com/Immortal8725/KEL

Next.js 16 · React 19 · TypeScript · Tailwind CSS · React Leaflet

- Built a municipal outage and revenue-protection web app with separate role-based views for residents, dispatchers, field technicians and inspectors
- Developed a live command map and technician tracking with React Leaflet, a field PWA, and REST + Server-Sent Events API routes

TECHNICAL SKILLS

Languages: Java, C#, JavaScript, TypeScript, SQL, PL/SQL, Python, HTML5, CSS3

Frameworks: Spring Boot, ASP.NET Core, Entity Framework Core, Java EE, Node.js / Express, React, Next.js, React Native / Expo

Databases: PostgreSQL, MySQL, H2

Concepts: REST APIs, JWT authentication, role-based access control, layered architecture, encryption, database design

Tools: Git, GitHub, Docker, Docker Compose
